

ΝΙΚΟΛΑΟΥ
N.K. nicolaou

The prime theme in the Nicolaou lab is the total synthesis of challenging biologically active natural products with the aim of inventing and discovering new synthetic technologies and strategies. Tandem reactions, cascade sequences and biomimetic strategies are frequently employed to rapidly and efficiently reach molecular complexity and diversity. Biology and medicine are often benefited from such endeavors, which provide wonderful opportunities to train young scientists and gain insights into the intricacies of complex molecules with regards to their chemical reactivity and biological action.

K.C. Nicolaou was born on July 5, 1946, in Cyprus, where he grew up and went to school until the age of 18. In 1964, he emigrated to England, where he spent two years learning English and preparing to enter the University. He studied chemistry at the University of London (B.Sc., 1969, Bedford College, First Class Honors; Ph.D. 1972, University College, with Professors F. Sondheimer and P.J. Garratt). In 1972, he moved to the United States, and after postdoctoral appointments at Columbia University (1972-1973, Professor T.J. Katz) and Harvard University (1973-1976, Professor E.J. Corey), he joined the faculty at the University of Pennsylvania, where he rose through the ranks to become the Rhodes-Thompson Professor of Chemistry. In 1989, he accepted joint appointments at the University of California, San Diego, where he was Distinguished Professor of Chemistry, and The Scripps Research Institute where he was the Chairman of the Department of Chemistry and held the Skaggs Professorship of Chemical Biology and the Darlene Shiley Chair in Chemistry. In 2013, he moved to Rice University in Houston, Texas, where he is the Harry C. and Olga K. Wiess Professor of Chemistry.
